

In cooperation for climate-conscious river basin management

Integrated application of innovative water management methods
at river basin by coordination of local governments

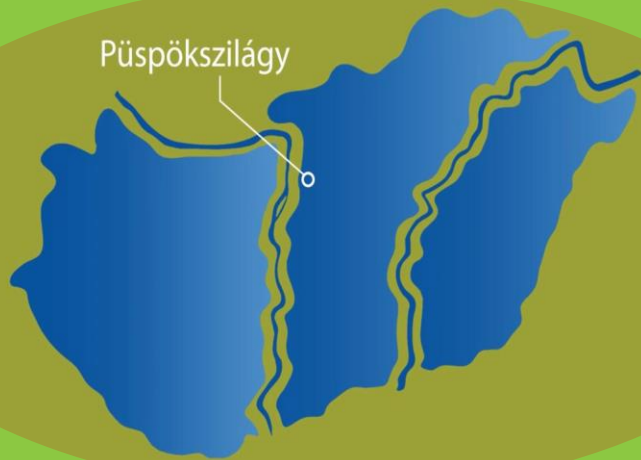

Project duration: October 2021 – September 2025
project id: LIFE20 CCA/HU/001604

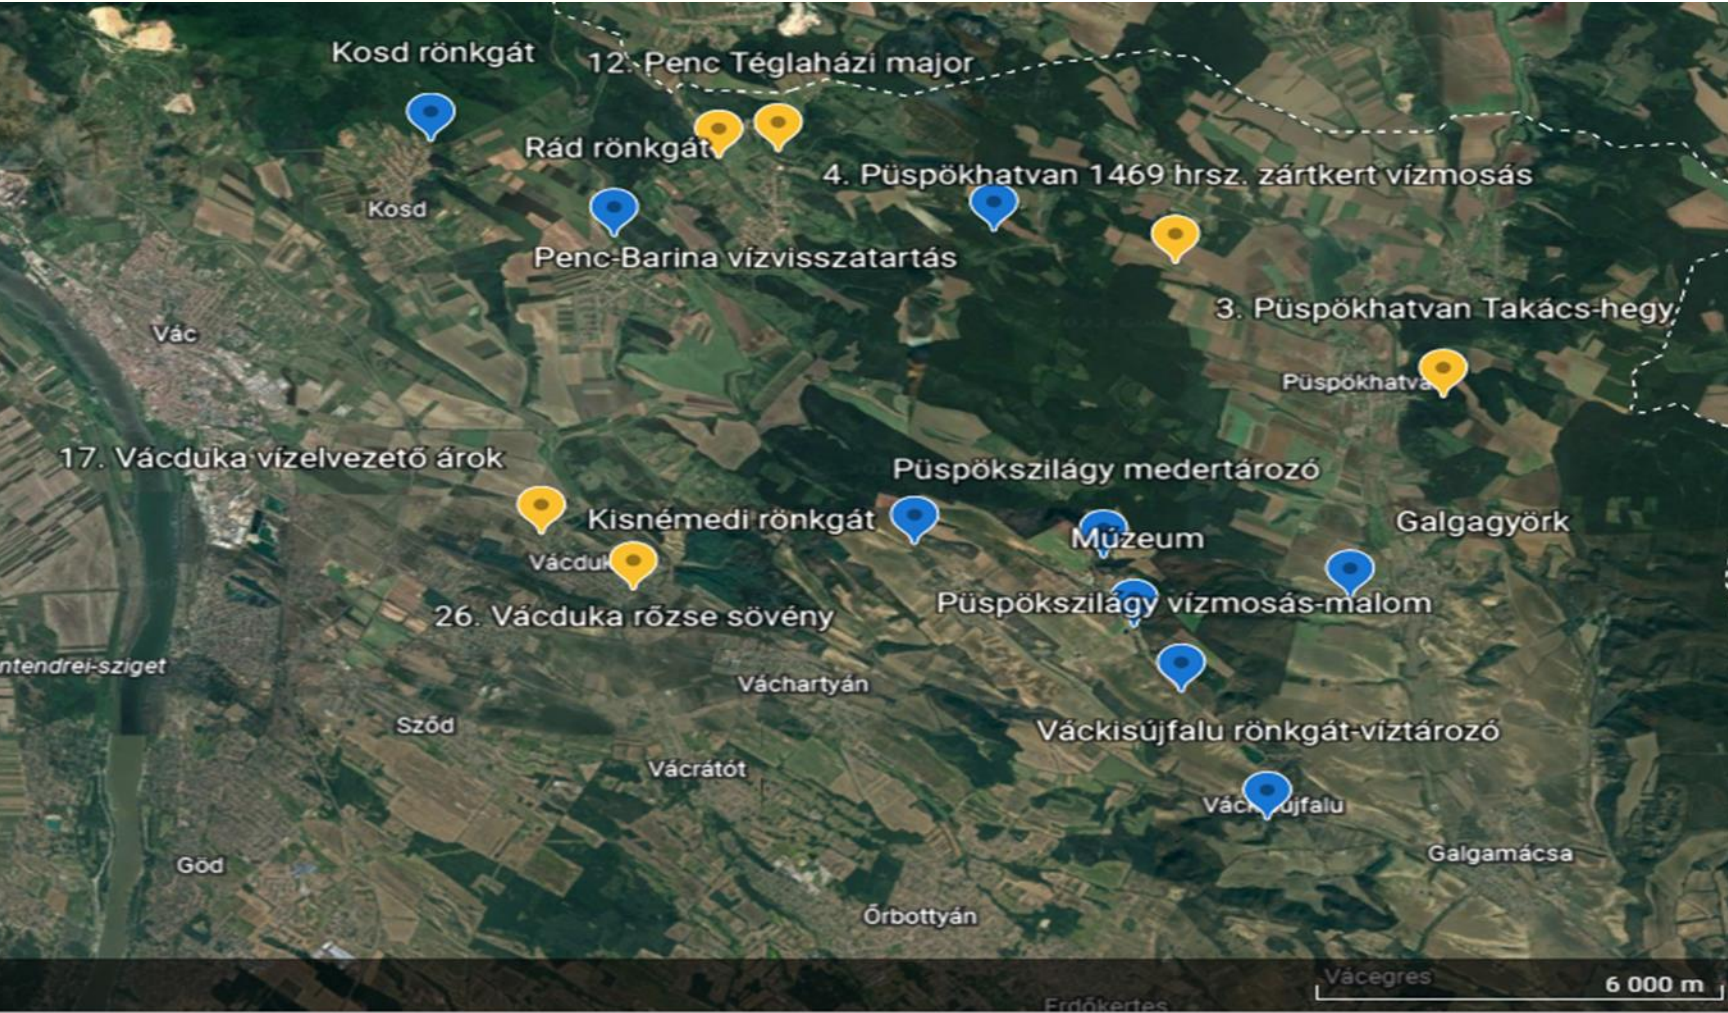

Catchment area in Püspökszilágy

Small-scale natural water retention solutions

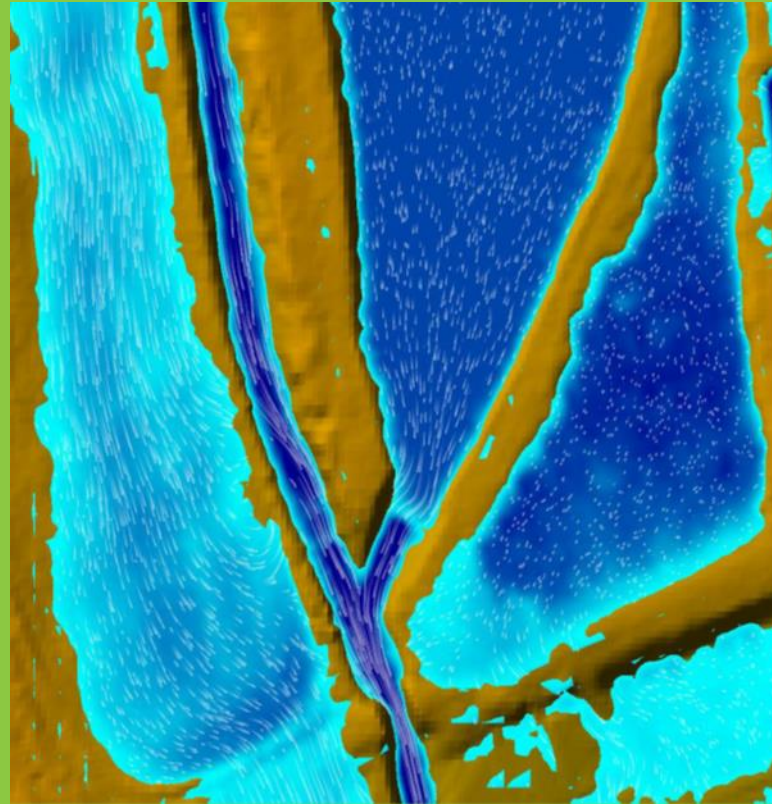

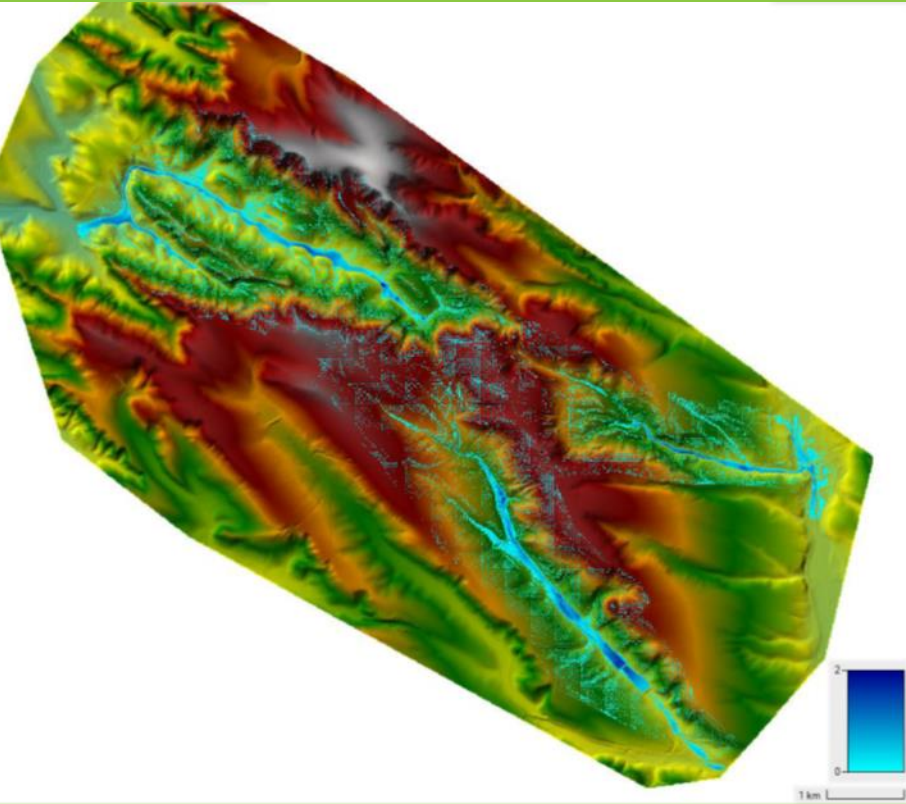

project locations at Püspökszilágy and surrounding areas

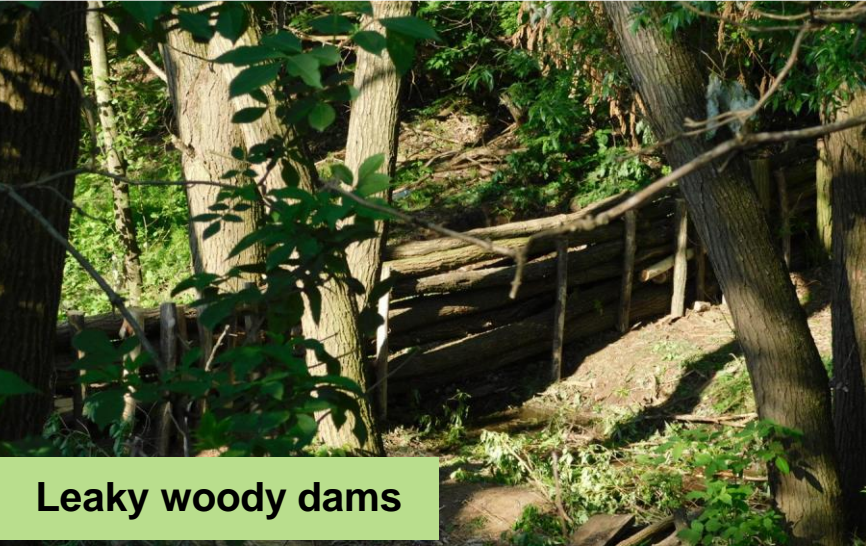

Water Flow modelling

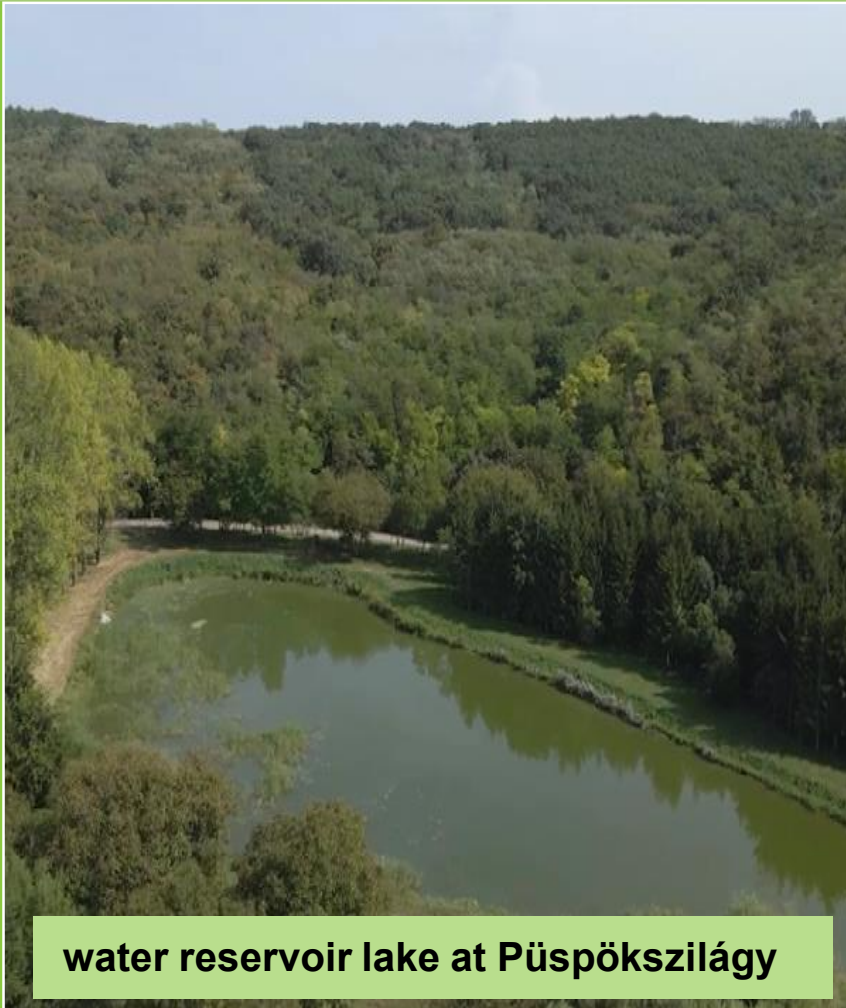

Our Solutions

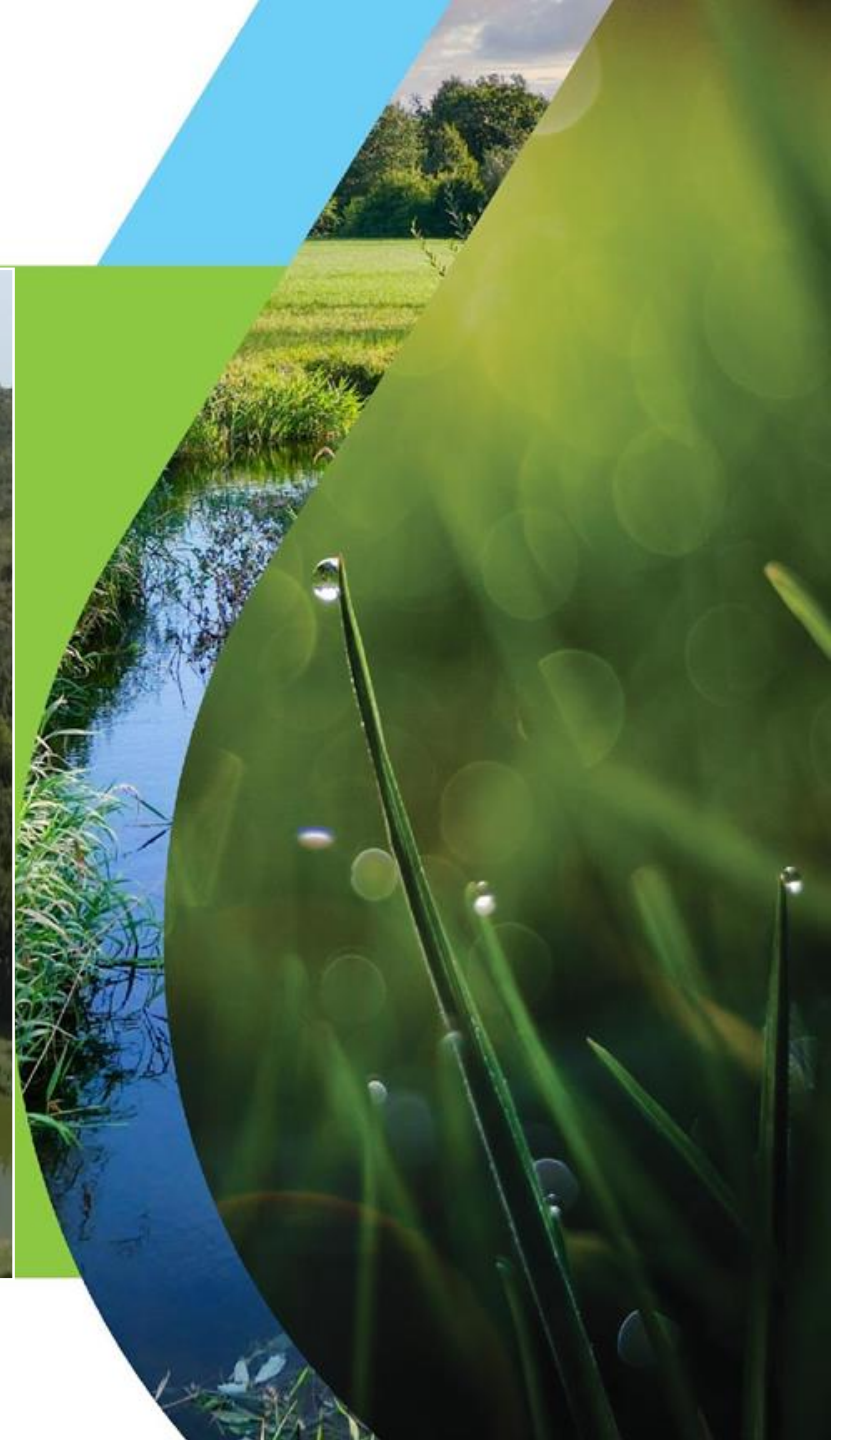

Leaky woody dams

Mud reservoir

water reservoir lake at Püspökszilágy

Small-scale solutions close to nature

Multi-stakeholder Catchment Forums (MCFs)

Multi-stakeholder Catchment Forums (MCFs)

- The role of MCFs goes beyond the project, as the goal is to set up a sustainable decision-making forum that supports future cooperation.
- Implementation of the NWRM chosen by MCF, which includes the necessary groundworks and water retention structures, construction documentation, operating rules and preparation of permits.
- It is likely that the Püspökszilágy Municipality will have to undertake the 10-year maintenance of the locations selected by the MCF.
- Planned budget: 34M HUF
